Introduction

Legollion Coin is a cryptocurrency created from blockchain technology decentralized in the Waves ecosystem designed to provide fast, secure and innovative transfer in order to bring the best of blockchain technology to our customers.

Legollion Coin had its first trading price on the Waves.Exchange platform, where 1 Legollion Coin was traded for US\$0.0024. Trading is 100% safe, fast and anonymous, where it is possible to buy and exchange your Legollion Coin for Waves.

But how does it work, what is it, what is it for and why should I invest in Legollion currency? These and all of your questions will be answered in the next few pages of our white paper.

About

It was created and adopted by the online African Peer-to-Peer Community in the Africa Space, which constitutes more than 90% of the economically disadvantaged and vulnerable population seeking self-help prosperity projects.

The name, Legollion Coin, was adapted from the phrase - Let's Go Get our Billions (The Billionaires Dream). This phrase was adopted within the community to keep the hope alive within the impoverished circumstance of the local populace.

Beginning

We are members of the online African Crypto Peer-to-Peer Community and have experience trading Bitcoin, but through the Binary Matrix System, which is an online cooperative operating as a fund of mutual form. However, the unexpected ban by one of Africa's most populous governments (Nigeria) of all crypto community trading platforms affected the existence of our online co-operative and made our continued trading of virtual money impossible.

Therefore, to keep our dream alive, of bringing the benefits of ICT, Cryptocurrency, and blockchain technology to our local community, and the potential for prosperity, we are leveraging the virtual export and internationalization of our aspirations, through an ICO, to protect our right to prosper from these technologies.

Story

With the desire to transform the impoverished African economies, the Legollion Coin was created to raise funds to build a first-class information and communication technologies (ICT) center here in Africa, where it is hoped that these technologies have the potential to empower usually disenfranchised and underserved populations

Therefore, Legollion Coin represents a less mature option than Bitcoin, so it promises better returns on investment for smaller market participants, we guarantee that Legollion Coin will bring you the following benefits that you will see on the following pages.

Creation

Legollion Coin was created on the Waves blockchain using waves' assets system, a system that offers unprecedented transfer speed, being able to do 100 transfers in one block, 20x more than bitcoin which only supports an average of 5 transactions, and in record time, it's a matter of seconds. We'll talk more about the technology used in creation in the next few pages.

The Legollion Team is made up of members of the on - African active P2P community. In this sense, Legollion Coin is the result of a team of people who formed a digital community for financial well-being .It is a coin created from an inspiring and heartfelt situation.

We believe that with Legollion Coin we can change the environment and the financial environment in which we find ourselves to something better and prosperous for us so that both parties gain and profit from our projects and plans that we are preparing for the future of the currency.

Future

The rise of protectionist and authoritarian territories, worldwide, justifies the introduction of new technologies and innovative ways to ensure the independence and freedom of vulnerable populations. Therefore, it is not just a socially responsible decision, to partner with us, but a good business decision, as well. The future of Legollion Coin is assured, by this self-determined truth; “no one can stop an idea whose time has come”.

The Project's Mission

Legollion Coin represents a less mature option than Bitcoin, so promises better returns on investment for smaller market players, and it is hopeful it will bring the following benefits:

1. Advanced ICT knowledge
2. Introduce a blockchain technology ecosystem
3. Introduce a real-world tradeable commodity to a new, very large market.
4. To assist even the people who are not educated to have a basic knowledge of computer knowledge
5. To assist and create a learning center for computer programming and other related computer-based related programs
6. To assist to narrow the gender gap inequality, especially among the women who are at a most disadvantaged position, to encourage them to work and earn from home and be their own boss.

Blockchain

Blockchain technology is nothing more than a public ledger that records a virtual currency transaction so that this record is reliable and immutable. This shows that transparency is one of the main attributes of the blockchain. The blockchain network is made up of miners who verify and record transactions in the block. To make this possible, miners lend computational power to the network.

As an incentive to continue collaborating and make the network sustainable and safer, they receive a reward in digital coins. The miner can only add a transaction to the block if a simple majority of the network agrees that transaction is legitimate and correct. The name of this is blockchain network consensus, consensus is measured through computational power. Two chains of blocks can be formed at the same time, the impasse will be resolved when the network needs to choose one of the chains.

WAVES

WAVES is a decentralized blockchain platform focusing on custom blockchain tokens operations.

National currencies transfer is maintained on the WAVES blockchain through compliant gateway operators.

The decentralized token exchange facilitates fundraising, crowdfunding, and trading of financial instruments on the blockchain. Lightweight clients provide an easy installation procedure and a flat learning curve for end-users.

Technology

Waves' blockchain has two main technologies for using cryptocurrencies in its network, such as Legollion Coin, in a secure way, where you can do tests on the network without having to have Legollion Coin, even the possibility of real transfer to Legollion Coin wallets, Named of Mainnet and Testnet.

Technology - Mainnet

Mainnet is the core of the Waves network where cryptocurrencies have real economic value and nodes that generate blocks are rewarded with native protocol currencies and transaction fees paid by participants. It allows the negotiation and transfer of Legollion Coin in a real and valid way in your Legollion wallet.

Technology - Testnet

Testnet is the application testing network. Testnet offers the same functionality as Mainnet. However, on Testnet you can get Legollion tokens for free using Faucet, so you can run your project with Legollion Coin without the risk of losing real money.

Currency Details

The details of our currency can be seen on the blockchain by the contract id below, this id is also used to identify the Legollion Coin in transaction and trading operations with it.

Id: DM9wQzfc1WpWbKofow5hVNM1EnqmpmxuDnYuvocDwohP

Supply: 42,000,000

Decimals: 8

Sender: 3PKe3EtQB6oXFetpzAjeU1BzEAuvJAbVfmg

Transaction Fee: 0.001 Waves

Details for developers

To develop with Legollion Coin you will need the Legollion Coin contract ID and waves Blockchain node api and documentation, which will be presented below.

Mainnet: <https://nodes.wavesnodes.com/>

Testnet: <https://nodes-testnet.wavesnodes.com/>

Stagenet: <https://nodes-stagenet.wavesnodes.com/>

Where are /asset/ put the contract ID of the Legollion Coin.

To learn more about it, visit the official waves blockchain website for developers or the link below.

Documentation: <https://docs.waves.tech/en/blockchain/blockchain-network/#tools>

Conclusion

Legollion Coin is an inspiration that within a few weeks was created, by a peer-to-peer crypto-adoptive community here in southeastern Nigeria in pursuit of self-help thriving projects. Legollion Coin is still a currency in its early stages, but with great growth rates and large and sustainable projects, made with the best technology.
